**Listing of Claims:**

Claims 1-16 (canceled)

- 1                    17. (withdrawn)        An enzyme bioreactor comprising a murine Fuc-TVII  
2 enzyme, a GDP-fucose donor substrate and a sialyl-N-acetyl-lactosamine acceptor substrate.
- 1                    18. (withdrawn)        The enzyme bioreactor of claim 17, wherein the Fuc-TVII  
2 enzyme is in solution.
- 1                    19. (withdrawn)        The enzyme bioreactor of claim 17, wherein the Fuc-TVII  
2 enzyme is immobilized on a solid phase matrix.
- 1                    20. (withdrawn)        The enzyme bioreactor of claim 17, wherein the Fuc-TVII  
2 enzyme is a recombinant enzyme.
- 1                    21. (withdrawn)        The enzyme bioreactor of claim 20, wherein the Fuc-TVII  
2 enzyme is produced in a mammalian host cell.
- 1                    22. (withdrawn)        The enzyme bioreactor of claim 20, wherein the Fuc-TVII  
2 enzyme is produced in a baculovirus host.
- 1                    23. (withdrawn)        The enzyme bioreactor of claim 17, wherein the sialyl-N-  
2 acetyl-lactosamine acceptor is on a glycoprotein.
- 1                    24. (withdrawn)        The enzyme bioreactor of claim 17, wherein the sialyl-N-  
2 acetyl-lactosamine acceptor is on a glycolipid.
- 1                    25. (withdrawn)        The enzyme bioreactor of claim 17, wherein the sialyl-N-  
2 acetyl-lactosamine acceptor is a free oligosaccharide.

1                   26. (withdrawn)       The enzyme bioreactor of claim 17, wherein the Fuc-TVII  
2 enzyme comprises a catalytic domain that is encoded by a nucleic acid segment amplified by a 5'  
3 primer as shown in SEQ ID NO:3 and a 3' primer as shown in SEQ ID NO:4.

1                   27. (withdrawn)       A method of preparing a sialyl Lewis x determinant, the  
2 method comprising contacting a murine Fuc-TVII enzyme with a GDP-fucose donor substrate  
3 and a sialyl-N-acetyl-lactosamine acceptor substrate in an enzyme bioreactor under conditions  
4 that allow the addition of an  $\alpha$ 1,3 linked fucose to the sialyl-N-acetyl-lactosamine acceptor  
5 substrate.

1                   28. (withdrawn)       The method of claim 27, wherein the Fuc-TVII enzyme is  
2 in solution.

1                   29. (withdrawn)       The method of claim 27, wherein the Fuc-TVII enzyme is  
2 immobilized on a solid phase matrix.

1                   30. (withdrawn)       The method of claim 27, wherein the Fuc-TVII enzyme is a  
2 recombinant enzyme.

1                   31. (withdrawn)       The method of claim 20, wherein the Fuc-TVII enzyme is  
2 produced in a mammalian host cell.

1                   32. (withdrawn)       The method of claim 20, wherein the Fuc-TVII enzyme is  
2 produced in a baculovirus host.

1                   33. (withdrawn)       The method of claim 27, wherein the sialyl-N-acetyl-  
2 lactosamine acceptor is on a glycoprotein.

1                   34. (withdrawn)       The method of claim 27, wherein the sialyl-N-acetyl-  
2 lactosamine acceptor is on a glycolipid.

1                    35. (withdrawn)        The method of claim 27, wherein the sialyl-N-acetyl-  
2        lactosamine acceptor is a free oligosaccharide.

1                    36. (withdrawn)        The method of claim 27, wherein the Fuc-TVII enzyme  
2        comprises a catalytic domain that is encoded by a nucleic acid segment amplified by a 5' primer  
3        as shown in SEQ ID NO:3 and a 3' primer as shown in SEQ ID NO:4.

1                    37. (previously presented)    A murine Fuc-TVII enzyme comprising a catalytic  
2        domain that is encoded by a nucleic acid sequence segment amplified by a 5' primer as shown in  
3        SEQ ID NO:3 and a 3' primer as shown in SEQ ID NO:4.

1                    38. (previously presented)    The murine Fuc-TVII enzyme of claim 37, wherein  
2        the catalytic domain is encoded by a nucleic acid segment consisting of residue 2194 to residue  
3        3085 of SEQ ID NO: 1.
